

RAN-RM Level I Energy Audit Information Series

January 29: Specifications for Windows

Presenter: Brad Begin, Alpen High Performance Products

Registration: [Eventbrite Link](#)

Attendance: Register via Eventbrite to receive a Zoom invite

Time: 3:30 - 4:45 PM MT

Brad Begin is the Chairman of Alpen High Performance Products, located in Louisville, CO. For more than four decades, Alpen has focused on high performance fenestration solutions for both residential and commercial projects. During this session, Begin will share information on a range of solutions offered by Alpen for upgrading existing buildings with different product options, including its multiple lines of cost effective window and door products, as well as Alpen's new innovative high performance thin glass triple pane insulated glass units and award winning high performance WinSert secondary window product line. Begin will introduce this range of product options, focusing on price points and levels of complexity with a simple decision matrix for choosing the right product based on an evaluation of the existing building conditions and objectives of a building owner.

Begin will also provide an update on market dynamics for high performance window, door and glass products during this exciting time in the development of innovative and cost effective solutions, with a focus on the most cost effective and practical ways to upgrade the historically most neglected low performance elements of buildings - windows and glass.
